CALIBER / FIELD STUDY 03

Cards and widgets

Small surfaces. More signal.

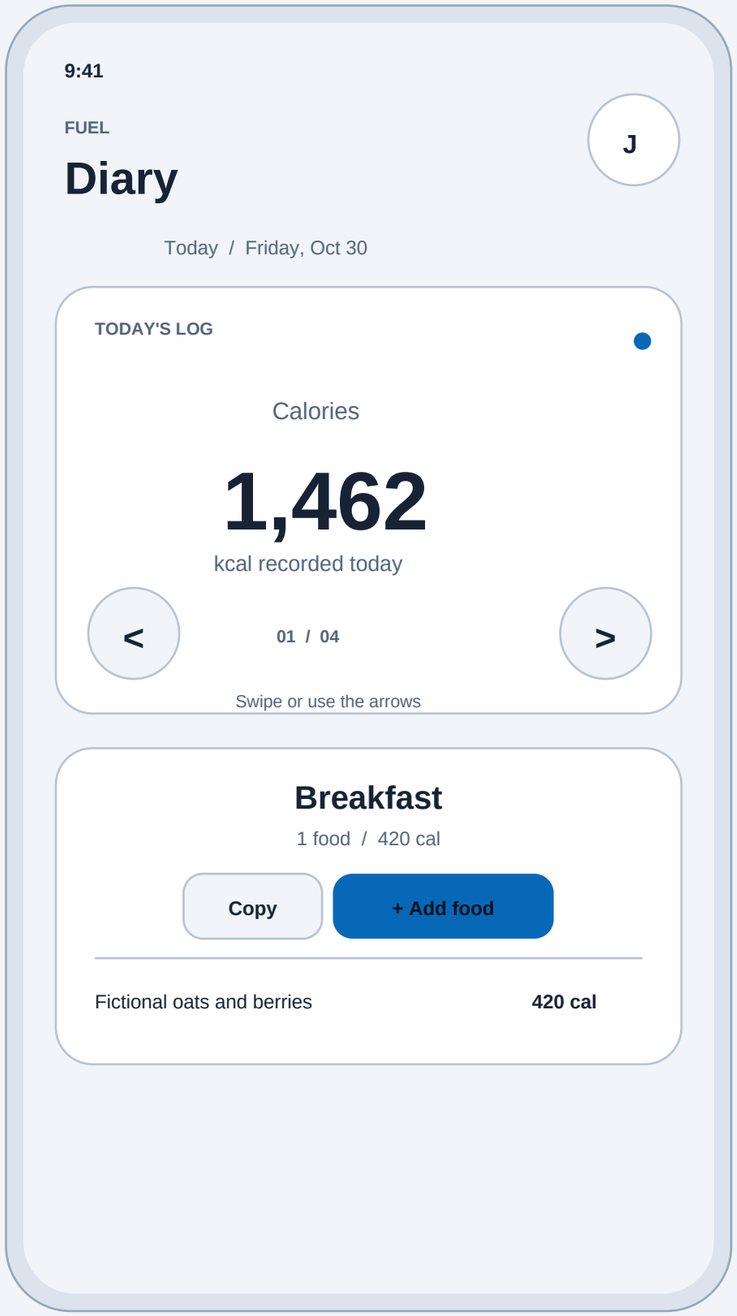
A swipeable daily nutrition summary and a family of iPhone widgets, extending the Graphite and Frost visual system.

Design focus

Recorded food values only. Labeled alternate controls. Private widget states. No new estimates, target math, shared data container, or dose content.

One card. Four views.

A clearly labeled nutrition card can move between calories, protein, carbs and fat without moving the diary underneath it.



CARD ORDER

01	**Calories**	1,462 kcal
02	**Protein**	142 g
03	**Carbs**	118 g
04	**Fat**	52 g

The swipe stays inside the daily summary. Large previous/next controls and a page count keep the change discoverable; food rows keep their native edit and delete gestures.

Metric order reads as logged energy first, followed by the three logged macros. If a value is unavailable, show an em dash and a clear 'not recorded' label rather than a fabricated zero.

Choose the useful amount of detail.

The same nutrition snapshot adapts to the space. The larger layout adds macros; it does not stretch a small layout.

GRAPHITE

1,462

kcal logged

OPEN DIARY >

FROST

CALIBER / FUEL / TODAY

1,462

kcal logged

OPEN DIARY >

SMALL / One logged daily total. A single clear tap opens the Diary.

CALIBER / FUEL / TODAY OPEN DIARY >

1,462

kcal logged

PROTEIN	CARBS	FAT
142 g	118 g	52 g

Graphite

CALIBER / FUEL / TODAY OPEN DIARY >

1,462

kcal logged

PROTEIN	CARBS	FAT
142 g	118 g	52 g

Frost

Details appear by choice.

Large widgets can add a meal-by-meal snapshot. A system privacy-redacted state keeps personal numbers out of view when settings require it.

LARGE / FROST

CALIBER / FUEL / TODAY

1,462
kcal logged

Breakfast	420 cal
Lunch	650 cal
Dinner	0 cal
Snacks	392 cal

OPEN DIARY >

LOCKED PREVIEW

CALIBER / FUEL

Your diary is private

WidgetKit marks nutrition as sensitive. The person controls whether values appear while locked.

Open Fuel

The preview uses synthetic values and is a visual proposal. A shipped widget still needs a reviewed opt-in, data-sharing contract, protected snapshot, expiry rules, and tests around midnight and stale data.

NO STACK DETAILS / NO WEIGHT OR PHOTO / NO WIDGET-SIDE FOOD SAVE IN THIS STUDY

Design direction, not a shipped widget.

The prototype demonstrates hierarchy and states. Native work starts only after the local data boundary and user privacy choices are reviewed.

01 / SWIPE BEHAVIOR

Page only the logged calorie/protein/carbs/fat summary. Provide labeled previous/next controls, page position, keyboard and VoiceOver alternatives. Disable autoplay and honor Reduce Motion.

02 / WIDGET BEHAVIOR

Small emphasizes one daily total, medium adds macro rows, large can show four meal totals. A tap opens the related Fuel screen; direct food logging is not part of this study.

03 / PRIVACY BOUNDARY

Widget content can be visible outside the unlocked app. Use WidgetKit sensitive-content redaction and a user-reviewed sharing boundary; Stack compounds, amounts, schedules and photos stay excluded.

04 / UPDATE BEHAVIOR

Refresh after a successful local save and use a timeline for known changes. WidgetKit schedules refreshes within a dynamic budget, so design honest stale-data language.
